

## CLAIMS

1. Use of Component B in combination with a human growth factor for the preparation of a composition for promoting angiogenesis.

5 2. The use according to Claim 1 in the treatment of wounds, ulcers and other traumatic lesions to any of the tissues in the body.

3. Pharmaceutical composition useful as cicatrizers comprising Component B and a human growth factor as active principles in combination with a pharmaceutically acceptable carrier.

10 4. Pharmaceutical composition according to Claim 3 wherein the two active principle are both present in a single administration dose.

5 5. Pharmaceutical composition according to Claim 3 wherein the two active principle are present each in a separated administration dose.

6. Pharmaceutical composition according to <sup>Claim 3</sup> Claims 3-5 wherein the human growth factor is bFGF or VEGF.

15 7. Method of treatment of wounds, ulcers and other traumatic lesions to any of the tissues in the body comprising administering in a single administration dose an effective amount of Component B and an effective amount of a human growth factor.

8. Method according to Claim 7 wherein the two active principles are administered in separated administration dose.

20 9. Method according to <sup>Claim 8</sup> Claims 8 and 9 wherein the human growth factor is bFGF or VEGF.
